Make Your Home the Solution to Stormwater Pollution

A homeowner's guide to healthy habits for clean water

As stormwater flows over driveways, lawns, and sidewalks, it picks up debris, chemicals, dirt and other pollutants. Stormwater can flow into a storm sewer system or directly to a lake, stream, river, wetland or coastal water. Anything that enters a storm sewer system is discharged untreated into the waterbodies we use for swimming, fishing and providing drinking water.

Polluted runoff is the nation's greatest threat to clean water.

By practicing healthy household habits, homeowners can keep common pollutants like pesticides, pet waste, grass clippings, and automotive fluids off the ground and out of stormwater. Adopt these healthy household habits and help protect our waterways. Remember to share the habits with your neighbors!

Healthy Household Habits for Clean Water

Vehicle and Garage

Use a commercial wash or wash your own car on a lawn or other unpaved surface to minimize the amount of dirty, soapy water flowing into the storm drain. Check your car, boat, motorcycle, other machinery and equipment for leaks and spills. Make repairs as soon as possible. Clean up spilled fluids with an absorbent material like kitty litter or sand, and don't rinse the spills into a nearby storm drain. Remember to properly dispose of the absorbent material. Recycle used oil and other automotive fluids at participating service stations. Don't dump these chemicals down the storm drain or dispose of them in your trash.

Lawn and Garden

Use pesticides and fertilizers sparingly. When use is necessary, use these chemicals in the recommended amounts. Avoid application if the forecast calls for rain; otherwise, chemicals will be washed into your local stream and flow downstream into your drink water source. Select native plants and grasses that are drought- and pest-resistant. Native plants require less water, fertilizer and pesticides. Sweep up yard debris, rather than hosing down areas. Compost or recycle yard waste when possible. Don't overwater your lawn. Water during the cool times of the day, and don't let water runoff into the storm drain. Cover piles of dirt and mulch being used in landscaping projects to prevent these pollutants from blowing or washing off your yard and into local waterbodies. Vegetate bare spots in your yard to prevent soil erosion.

Home Repair and Improvement

Before beginning an outdoor project, locate the nearest storm drains and protect them from debris and other materials. Sweep up and properly dispose of construction debris such as concrete and mortar. Use hazardous substances like paints, solvents, and cleaners in the smallest amount possible, and follow the directions on the label. Clean up spills immediately, and dispose of the waste safely. Store substances properly to avoid leaks and spills. Purchase and use nontoxic, biodegradable, recycled and recyclable products whenever possible. Reduce the amount of paved area and increase the amount of vegetated area in your yard. Use native plants in your landscaping to reduce the need for watering during dry periods. Consider directing downspouts away from paved surfaces onto lawns and measures to increase infiltration and reduce polluted runoff.

Healthy Household Habits for Clean Water

Swimming Pool and Spa

Drain your swimming pool only when a test kit does not detect chlorine levels. Whenever possible, drain your pool or spa into the sanitary sewer system. Properly store pool and spa chemicals to prevent leaks and spills, preferably in a covered area to avoid exposure to stormwater.

Septic System Use and Maintenance

Have your septic system inspected by a professional at least every 3 years and have the septic tank pumped as necessary (usually every 3 to 5 years). Care for the septic system drain field by not driving or parking vehicles on it. Plant only grass over and near the drain field to avoid damage from roots. Flush responsibly. Flushing household chemicals like paint, pesticides, oil and antifreeze can destroy the biological treatment taking place in the system. Other items, such as diapers, paper towels and cat litter can clog the septic system and potentially damage components.

Pet Care

When walking your pet, remember to pick up the waste and dispose of it properly. Flushing pet waste is the best disposal method. Leaving pet waste on the ground increases public health risks by allowing harmful bacteria and nutrients to wash into the storm drain and eventually into local waterbodies.

Storm drains connect to waterbodies!

Remember: Only rain down the drain
